SIX SIGMA ENABLED BUSINESS INTELLIGENCE SYSTEM

ABSTRACT

A method of presenting an analysis of enterprise wide business data. In
response to a user request to a web site operable to access enterprise wide

5   business data and to provide statistical analysis, a six sigma enabled BIS
transfers an electronic document to the user. The electronic document allows
the user to select dimensions to specify which data to analyze for a given
performance measure. Then, in response to a request from the user for a
statistical analysis, the six sigma enabled BIS performs a statistical analysis of

10   the performance measure and transfers an electronic copy of the statistical
analysis to the user. In one embodiment the document comprises a histogram.
The histogram has an overlay indicator of the statistical mean, as well as a
target limit. In this fashion, the user may view the variance in the data, and see
how much data are outside the target range.
